

RAMRI — Examiner Interview Sheet**SET 1 • OPTION A**

Student: _____ Date: 23 July 2026 Examiner: _____

SET A — OPERATIONS MIX**WORK SAMPLE**

Lee made a triangle using toothpicks. He knows that a triangle has 3 sides, but does not know how many vertices it has. Circle each vertex on the triangle below.

Domain: Geometry

Year: Grade 3

CLINICAL FOCUS • Correct Vertices Identification response with working shown. Confirm the student can articulate **WHY** the method works, not just that it produced the right answer — pay attention to conceptual understanding.

INTERVIEW QUESTIONS & NOTES**UNIVERSAL — OPENING**

Can you tell me about this work? Walk me through what you did.

The student's initial response was, "This is very easy. You just need to count them." She indicated that she solved the problem by counting the vertices directly.

CONCEPTUAL — UNDERSTANDING

What does [the key idea in this problem] mean to you? How did you know what kind of problem this was?

The student identified this as a counting task because the question asked, "How many?" She associated the wording of the question with the need to count.

STRATEGY — METHOD

How did you decide what to do first? Why did you choose that approach?

The student did not provide a specific explanation of her strategy beyond indicating that she counted the vertices.

VERIFICATION — CHECKING

How would you know if your answer is right? How could you check?

The student stated that she would count the vertices again to check whether her answer was correct.

ERROR AWARENESS — REFLECTION

Is there anything you would do differently? Is there anything that doesn't look quite right to you?

The student did not identify any errors or alternative approaches, explaining simply that it was "just counting."

METACOGNITION — THINKING

What felt easy about this? What felt hard? What were you thinking when you got to [a key step]?

The student described the task as easy, explaining that "A triangle has three vertices, so it's very simple." She demonstrated confidence in her answer and perceived the task as straightforward.

TRANSFER — EXTENSION (OPTIONAL)

What if [vary a number or condition]? Would your method still work?

ADDITIONAL NOTES

RAMRI — Examiner Interview Sheet**SET 1 • OPTION B**

Student: _____

Date: 23 July 2026

Examiner: _____

SET A — OPERATIONS MIX**WORK SAMPLE**

$9 + 8 = \underline{17}$

Student's answer: 20

Domain: Addition Reasoning

Year: Grade 1

CLINICAL FOCUS • Error in Single-digit addition. Determine whether this is a conceptual gap in Addition Reasoning or a procedural slip, focusing on procedural reasoning — and whether the student recognises the mistake when they revisit it.

INTERVIEW QUESTIONS & NOTES**UNIVERSAL — OPENING**

Can you tell me about this work? Walk me through what you did.

The student explained that for single-digit addition problems, she first draws circles to represent each number and then counts all the circles to find the total.

CONCEPTUAL — UNDERSTANDING

What does [the key idea in this problem] mean to you? How did you know what kind of problem this was?

The student recognised the task as an addition problem because it contained an addition equation.

STRATEGY — METHOD

How did you decide what to do first? Why did you choose that approach?

The student reported that this is the method she has always used: drawing circles to represent the numbers and then counting the total number of circles to obtain the answer.

VERIFICATION — CHECKING

How would you know if your answer is right? How could you check?

The student was unable to describe a strategy for checking whether her answer was correct.

ERROR AWARENESS — REFLECTION

Is there anything you would do differently? Is there anything that doesn't look quite right to you?

The student's original written answer was 19. When invited by the examiner to demonstrate her calculation process, she realised that she had miscounted the circles. She recounted them, determined that the correct answer was 17, and independently corrected her response.

METACOGNITION — THINKING

What felt easy about this? What felt hard? What were you thinking when you got to [a key step]?

The student commented that counting the circles could be difficult because she might miscount them. She identified the counting process as the most challenging part of the task.

TRANSFER — EXTENSION (OPTIONAL)

What if [vary a number or condition]? Would your method still work?

BEHAVIOURAL OBSERVATIONS

	0	1	2	3	4
Anxiety	☐	☐	☒	☐	☐

ADDITIONAL NOTES

RAMRI — Examiner Interview Sheet**SET 1 • OPTION C**

Student: _____

Date: 23 July 2026

Examiner: _____

SET A — OPERATIONS MIX**WORK SAMPLE**

Count by 2s: 2, 4, 6, 8, 10, __, __, __, __, __

Student's answer: 11, 12, 13, 14, 15

Domain: Number Sense

Year: Grade 3

CLINICAL FOCUS • Error in Skip Counting by 2s. Determine whether this is a conceptual gap in Number Sense or a procedural slip, focusing on procedural reasoning — and whether the student recognises the mistake when they revisit it.

INTERVIEW QUESTIONS & NOTES**UNIVERSAL — OPENING***Can you tell me about this work? Walk me through what you did.*

The student explained, "I just remembered it: 2, 4, 6, 8, 10, 11, 12, 13, 14, 15." When the examiner asked what would come next if she continued the sequence, she responded, "16, 17, 18, 19."

CONCEPTUAL — UNDERSTANDING*What does [the key idea in this problem] mean to you? How did you know what kind of problem this was?*

The student was unable to explain what the task required or demonstrate an understanding of counting by twos.

STRATEGY — METHOD*How did you decide what to do first? Why did you choose that approach?*

The student was unable to describe how she generated the sequence or explain the strategy she used.

VERIFICATION — CHECKING*How would you know if your answer is right? How could you check?*

No response provided.

ERROR AWARENESS — REFLECTION

Is there anything you would do differently? Is there anything that doesn't look quite right to you?

No response provided.

METACOGNITION — THINKING

What felt easy about this? What felt hard? What were you thinking when you got to [a key step]?

No response provided.

TRANSFER — EXTENSION (OPTIONAL)

What if [vary a number or condition]? Would your method still work?

ADDITIONAL NOTES

RAMRI — Transfer Probe Sheet

SET 1 · TRANSFER

Student: _____

Date: 23 July 2026

Examiner: _____

SET A — OPERATIONS MIX

Present this problem **after** the student has discussed their chosen work sample. This problem has not appeared in their materials.

TRANSFER PROBLEM

Lee has 7 red toothpicks and 6 blue toothpicks. How many toothpicks does he have in all?

Addition Reasoning

Single-digit addition

expected

EXPECTED ANSWER

13

CLINICAL RATIONALE

This problem transfers the single-digit addition skill to a new context (toothpicks, not abstract numbers) and requires adding two numbers that sum to more than 10, similar to the original 9+8 but with different addends to prevent recall of a rehearsed answer.

EXAMINER OBSERVATIONS & NOTES

The student successfully identified the key information in the problem and correctly formulated the addition equation $7 + 6$. She applied her usual strategy by drawing circles to represent each quantity and then counting all the circles to determine the total. After obtaining the correct sum, she recorded the answer independently.

BEHAVIOURAL OBSERVATIONS

	0	1	2	3	4
Anxiety	0	1	2	3	4
Confidence	0	1	2	3	4
Engagement	0	1	2	3	4

0 = Not present · 1 = Mild · 2 = Moderate · 3 = Marked · 4 = Severe

RAMRI — Examiner Interview Sheet**SET 2 • OPTION A**

Student: _____

Date: 23 July 2026

Examiner: _____

SET B — GEOMETRY AND TIME**WORK SAMPLE**

Jen draws a shape with 4 sides and 4 vertices. Which could be Jen's shape?
Choose three that apply.

Student's answer: [Printed square shape with handwritten checkmark and squiggle line; printed trapezoid shape with handwritten squiggle line; printed triangle shape with handwritten cross/slash; printed rhombus shape with no mark]

Domain: Geometry

Year: Grade 3

CLINICAL FOCUS • Error in Shape Properties (Sides and Vertices). Determine whether this is a conceptual gap in Geometry or a procedural slip, focusing on conceptual understanding — and whether the student recognises the mistake when they revisit it.

INTERVIEW QUESTIONS & NOTES**UNIVERSAL — OPENING**

Can you tell me about this work? Walk me through what you did.

The student worked through the shapes one by one, counting the number of sides on each shape. She selected each shape that had four sides and four vertices and crossed out the final shape because it did not meet the criteria. However, she did not notice that the question required her to "choose three that apply."

CONCEPTUAL — UNDERSTANDING

What does [the key idea in this problem] mean to you? How did you know what kind of problem this was?

The student explained that the task was to count the number of sides on each polygon and select the shapes that met the required conditions of having four sides and four vertices.

STRATEGY — METHOD

How did you decide what to do first? Why did you choose that approach?

The student was unable to explain why she chose this approach or describe her strategy beyond counting the sides and vertices of each shape.

VERIFICATION — CHECKING

How would you know if your answer is right? How could you check?

The student stated that she would count the sides and vertices again to check her answer.

ERROR AWARENESS — REFLECTION

Is there anything you would do differently? Is there anything that doesn't look quite right to you?

The student did not identify any errors in her response and did not recognize that she had overlooked the instruction to "choose three that apply."

METACOGNITION — THINKING

What felt easy about this? What felt hard? What were you thinking when you got to [a key step]?

The student did not comment on the difficulty of the task or describe her thinking process.

TRANSFER — EXTENSION (OPTIONAL)

What if [vary a number or condition]? Would your method still work?

BEHAVIOURAL OBSERVATIONS

RAMRI — Examiner Interview Sheet

SET 2 • OPTION C

Student: _____

Date: 23 July 2026

Examiner: _____

SET B — GEOMETRY AND TIME

WORK SAMPLE

12 + 6 = _____

Student's answer: 6

Domain: Addition Reasoning

Year: Grade 2

CLINICAL FOCUS • Error in Addition within 20. Determine whether this is a conceptual gap in Addition Reasoning or a procedural slip, focusing on procedural reasoning — and whether the student recognises the mistake when they revisit it.

INTERVIEW QUESTIONS & NOTES

UNIVERSAL — OPENING

Can you tell me about this work? Walk me through what you did.

The student used a 1–100 number chart to solve the problem. She located 12 on the chart, counted forward six numbers, arrived at 18, and recorded 18 as her answer.

CONCEPTUAL — UNDERSTANDING

What does [the key idea in this problem] mean to you? How did you know what kind of problem this was?

The student recognised the task as an addition problem.

STRATEGY — METHOD

How did you decide what to do first? Why did you choose that approach?

The student explained that for addition problems involving numbers larger than single digits, drawing circles would require too many representations. Instead, she preferred using a number chart because it allowed her to count forward more efficiently.

VERIFICATION — CHECKING

How would you know if your answer is right? How could you check?

The student stated that she would count again to verify her answer.

ERROR AWARENESS — REFLECTION

Is there anything you would do differently? Is there anything that doesn't look quite right to you?

The student was unable to identify any errors or describe what she might do differently.

METACOGNITION — THINKING

What felt easy about this? What felt hard? What were you thinking when you got to [a key step]?

The student did not comment on the difficulty of the task or describe her thinking process.

TRANSFER — EXTENSION (OPTIONAL)

What if [vary a number or condition]? Would your method still work?

SET B — GEOMETRY AND TIME

Present this problem **after** the student has discussed their chosen work sample. This problem has not appeared in their materials.

TRANSFER PROBLEM

A rectangle has 4 sides and 4 vertices. If you draw a triangle inside the rectangle without lifting your pencil, how many total sides and vertices does the new shape have?

Geometry

Shape Properties (Sides and Vertices)

expected

EXPECTED ANSWER 7 sides and 7 vertices**CLINICAL RATIONALE**

This problem requires the student to apply understanding of sides and vertices in a novel composite shape, moving beyond simple identification to counting combined properties, while also integrating addition reasoning from the student's other incorrect items.

EXAMINER OBSERVATIONS & NOTES

The student indicated that she did not fully understand the requirements of the transfer problem.

SET C — REASONING AND PROBLEM-SOLVING

Present this problem **after** the student has discussed their chosen work sample. This problem has not appeared in their materials.

TRANSFER PROBLEM

A farmer had some apples. After giving 7 apples to each of 4 friends, she has 5 apples left. How many apples did she have at the start?

Subtraction Reasoning

Missing Minuend

advanced

EXPECTED ANSWER 33**CLINICAL RATIONALE**

This problem requires the student to identify the unknown starting total (minuend) in a multi-step context, transferring the missing-minuend skill to a real-world scenario with different numbers and an added multiplication step.

EXAMINER OBSERVATIONS & NOTES

The student indicated that she did not fully understand the requirements of the transfer problem. She thought 7 and 5 are the key numbers, and 4 is not important.
